

# Mag-BIND<sup>®</sup> RxnPure Plus

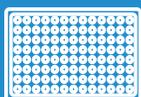

Purifies DNA from PCR and other enzymatic reactions

CAT NO: M1386

## Rapid

No centrifugation steps

## Versatile

Can be processed in 96- or 384-well formats

## Quality

Purified DNA suitable for a variety of downstream applications

## Automatable

Adaptable on most open-ended liquid handlers

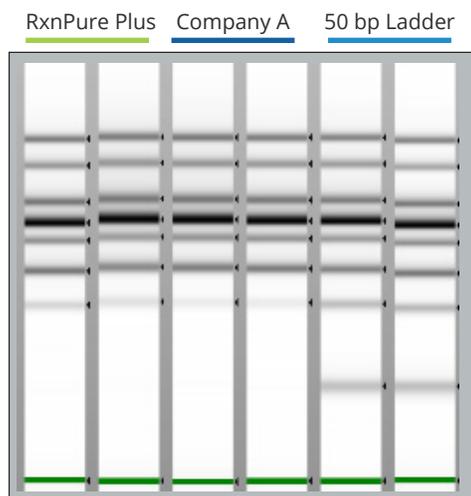

## Cost-Effective

**30%** less than the competition on average

**Mag-BIND<sup>®</sup> RxnPure Plus** allows rapid and reliable recovery of DNA from PCR and other enzymatic reactions. The system combines Omega Bio-tek's proprietary chemistries with the reversible nucleic acid-binding properties of magnetic beads to selectively bind PCR amplicons 100 bp and larger to eliminate excess unincorporated nucleotides, primers, and small, non-targeted amplification products, such as primer dimers.

This kit is designed for both manual and automated purification and may not require re-programming of liquid handling instruments, depending on your current method.

The Mag-BIND<sup>®</sup> RxnPure Plus is compatible with multiple liquid handlers and magnetic processors such as Hamilton Microlab<sup>®</sup> STAR<sup>™</sup> and STARlet<sup>™</sup> and Beckman Coulter Biomek<sup>®</sup> FX<sup>™</sup> and NX<sup>™</sup>.

**Figure 1 Title**

**Figure 1.** 10  $\mu$ L of 50 bp ladder was purified with Mag-BIND<sup>®</sup> RxnPure Plus and a comparable kit from Company A according to manufacturer's recommended protocols. The DNA was eluted in 20  $\mu$ L and analyzed on Agilent's TapeStation<sup>®</sup> 22000.

Product Description	Preps	Cat No.
Mag-BIND <sup>®</sup> RxnPure Plus	5 mL	M1386-00
	50 mL	M1386-01
	500 mL	M1386-02
